

ALM Integration Tool Deployment

Blueprint, in partnership with OpsHub and Tasktop, offers bi-directional integrations with various application lifecycle management systems to optimize the development of requirements. These integrations allow the rich visual requirements defined using Blueprint to be populated into the ALM system(s) of your choice, and lets data from these toolsets to be propagated back into Blueprint.

Integration managers communicate with Blueprint by using the Blueprint REST API and must be deployed within a corporate network at a point that has network connectivity to both the Blueprint Cloud REST API and the integration API of the ALM system.

Integrating with Blueprint Cloud

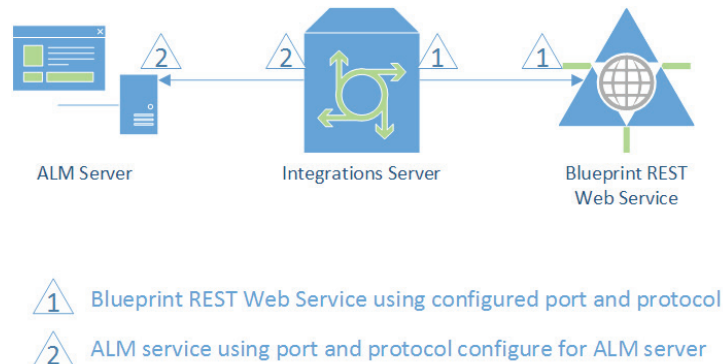

Typically, when integrating with the Blueprint Cloud, integration managers are deployed within the corporate DMZ with firewall rules that allow connections to both the Blueprint Cloud and the ALM server. Connections to the Blueprint Cloud REST API must use SSL and port 443.

-  Blueprint REST Web Service using SSL to port 443
-  ALM service using port and protocol configure for ALM server

Integrating Blueprint On-Premise

The Blueprint REST API may be configured to use any available port when it is deployed on-premise. Typically, when integrating with an on-premise instance of Blueprint, integration managers are deployed within the corporate network.

Supported ALM Integrations

Blueprint has integration with some of the most common ALM software such as:

- HP ALM, HP Quality Center
- IBM Rational Team Concert
- JIRA
- Microsoft Project Server
- Microsoft Team Foundation Server
- Rally
- VersionOne

For a complete list of integrations and supported versions, please refer to the “*Supported ALM Integrations*” datasheet.
