

Release Notes

Storyteller v2.4

This document provides an overview of the enhancement requests that were implemented in this release. It also outlines the known issues, and workarounds if applicable, that you may experience while using Storyteller v2.4.

For more detailed information about Storyteller, please refer to the Storyteller product documentation accessible through the product's user interface under "Storyteller Help".

Overview

This document provides an overview of the enhancements that were implemented in the Storyteller v2.4 release. It also outlines the known issues that you may experience while using these products. Workarounds are provided, if available. Each item in this document has at least one identifying number associated with it. The ER number is the enhancement request number. Searching for this number in the Blueprint Community will display the enhancement ID details. The internal defect tracking number is also included for reference purposes. When contacting Blueprint for technical support, please reference this number (if applicable).

Please visit <http://documentation.blueprintcloud.com> to access the latest Release Notes. If you require further assistance, or if you have encountered a problem that is not listed below, please submit a support case using the Customer Portal (<http://portal.blueprintsys.com>).

Upgrade Advisories

Please note the following advisories before proceeding with your product upgrade.

SQL Server Support

Support will be added for Microsoft SQL Server 2016. If you have any questions or concerns please reach out to the Blueprint Support Team.

Semantic Search

To enhance the user experience by improving search result accuracy, the search function is now based on Semantic Search.

This requires that Semantic Search and its dependent semantic language statistics database are installed and enabled on your SQL Server instance.

If these components are not present at the time of Blueprint installation, you will receive a warning, but the installation process will continue. The search function will work, but will be based on Full-Text Search, with relatively less optimal results.

The Semantic Search components can be installed at any time, and the search feature will seamlessly begin using it. However, It is recommended that your instance is prepared before installing Blueprint. Please consult the Blueprint Installation Guide for more information on installing Semantic Search.

Rapid Review Replacement

Rapid Review has been replaced by the new Review Experience. Previously-defined Collections can be used to create a Review, now with additional functionality and enhancements. Please refer to [What's New in Storyteller 2.4](#) for more information.

Implemented Enhancement Requests

This release introduces several changes:

- **Cross Project Copy:** All standard artifacts can be copied across projects. Trace relationships – if both ends of the trace are within the copy scope – and attachments/document references are preserved ([ER-1728](#)).
- **Baseline Creation From Review:** A Sealed Baseline is automatically created by the system when a Formal Review is activated. Users still have to manually create Baselines for Informal Reviews ([ER-1640](#)).
- **Bulk Actions Approvals in Reviews:** All artifacts in a Formal Review can be approved at once through bulk actions ([ER-1777](#)).
- **Text Wrapping:** In live artifacts and Reviews, any text that extends beyond the viewable area will wrap ([ER-1634](#)).
- **Artifact Specified URLs in Reviews:** As you are scrolling through a Review, the artifact ID in the URL will change to that of the artifact that is currently being viewed. This view will be preserved when sharing the URL ([ER-2032](#)).
- **Changed Artifact Indicator in Reviews:** When artifacts that are contained in a Review change, the Review table of contents will display an indicator next their names ([ER-2405](#)).
- **Expiry Date in Review Notifications:** Review participants receive an email notification when a Review requiring their participation is activated. This email includes the expiry date if the Review manager has set one ([ER-1654](#)).
- **Artifact Details Modal:** The artifact details stay open when accidentally clicking outside the modal ([ER-2396](#)).

Resolved Issues

The following issue was resolved for Storyteller v2.4.

Issue Number	Area Affected	Description
4746	Back End	Updated bundled TLS versions for security compliance.

Known Issues

The following are known issues in Storyteller v2.4.

Issue Number	Area Affected	Description and workaround (if available)
6610	Admin Portal	An error message appears when the user clicks “Save” in the Workflow canvas, when no changes were made.
6518	Review Metrics	When artifacts that are part of an Informal Review are updated after the Review is closed, they are marked as unviewed in the Review metrics.
6069	Routing Process	When clicking “Back” from a Process, the browser does not immediately route to previous page. The previous page only displays after the second click.
6068	Review Experience	In the Review experience, when a user selects a sub-artifact in a Process diagram, some information – Action, Objective, and System Response (if they have been defined in the task’s artifact details) – is not shown.
3945	Admin Portal	If using Internet Explorer, users may experience longer wait times when loading a Workflow diagram with a high amount of states. Workaround: Use Google Chrome as your web browser.
